11.2.1 Download ExamDeveloper Application Files

Set up SQL Server Database.

ExamDeveloper setup home page.

1. On the machine where the web server is to be located, create an *ExamDeveloper* folder, and a sub-folder called *Repositories*. Create a folder called *ExamDeveloper* within this folder. In our example, this is the **<SVNFolder>** folder, which is *C:\ExamDeveloper\Repositories\ ExamDeveloper*, which is where we will download the ExamDeveloper files.

**ⓘ What is the difference between the <SVNFolder> and <ExtractedFolder>?**

* Henceforth, we will refer to the path where ExamDeveloper files are going to be checked out as *<SVNFolder>*, which is *C:\Ex amDeveloper\Repositories\ExamDeveloper* in our example.

* Henceforth, we will refer to the path where ExamDeveloper web application files are going to be installed/copied as *<Extracte dFolder>*, which is *C:\inetpub\wwwroot\ExamDeveloper* in our example. Likewise, we will also refer to the path where the ExamDeveloper Asset folder and log files are stored as *<AppData>*, which will be *C:\ExamDeveloperData* in our example (you need to create this folder as well).
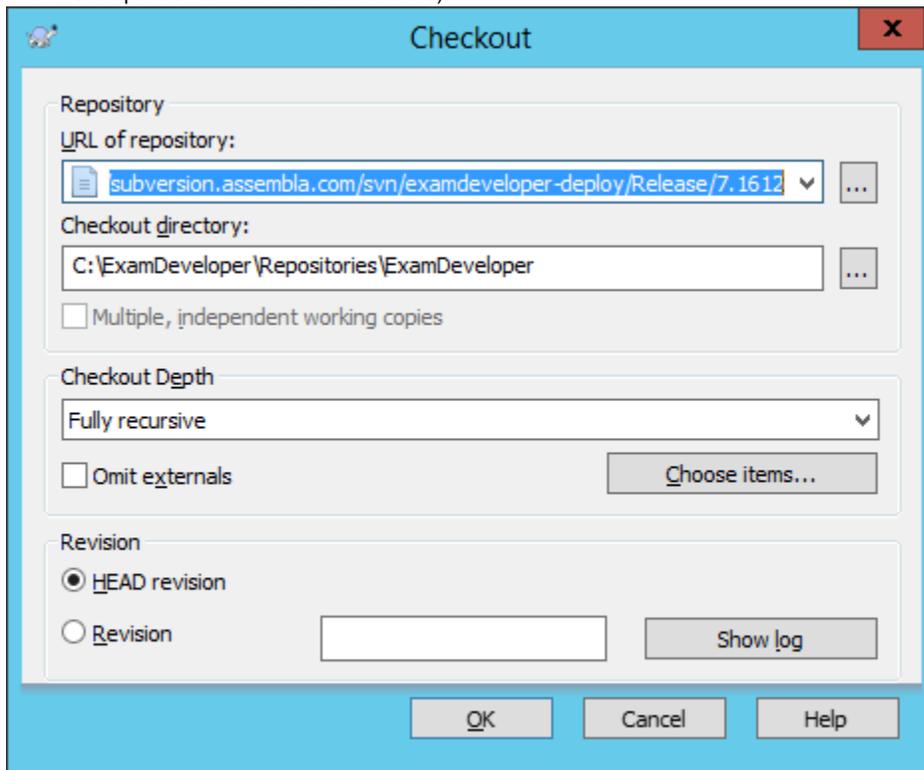

For side-by-side (additional instance) installation:

A separate folder needs to be created where the new instance of ExamDeveloper web application files are going to be installed/copied as *<ExtractedFolder_New>*, which is *C:\inetpub\wwwroot\ExamDeveloper_New* in our example. Likewise, we will also refer to the path where the new instance ExamDeveloper Asset folder and log files are stored as *<AppData_New>*, which will be *C:\ExamDeveloperData_New* in our example (you need to create this folder as well).

2. Right-click on *<SVNFolder>* and click **SVN Checkout**.

3. Enter the URL: **https://subversion.assembla.com/svn/examdeveloper-deploy/Release/XXX** (where "XXX" is the latest version of ExamDeveloper as found in Release Versions).

Click **OK**.

4. Please enter the username and password provided to you by the Pearson VUE Tech Support and click **OK**. The files will start downloading to the folder.

Click **OK** to close the Checkout window after the process finishes.

5. Create a folder at *C:\inetpub\wwwroot\ExamDeveloper*, known as *<ExtractedFolder>*, and copy the contents of *<SVNFolder>\Web* to this folder. Copy the *web.config* from the *<SVNFolder>\External* folder (if the file exists in this folder) and paste it to the *<ExtractedFolder >* folder (overwrite the existing file if one already exists). You do not need to do this if the file doesn't exist in *<SVNFolder>\External* or if it already exists in the *<ExtractedFolder>* folder.
