

# Version 7.1805

Date available on Pearson VUE Hosted Server: **May 24, 2018**

Potential date available for Remote Deployment Installations: **June 15, 2018**

 **Why is there a delay of releases for remote deployment installations?**  
There is usually a slight delay of releases for remote deployment installations while code is compiled and packaged into an installer package.

 This list is a summary of **planned** changes for the release and the final list of changes included may be different. Please check back **after** the release date for the complete list of changes included.

 Please be sure to review the Known Issues page to see a list of any continuing defects seen in the application [HERE](#).

## Release Updates

Pages	Users Affected	Description	When does this happen?	Outcome	Type
QTI	Managers	Text size for Enhanced Matching items is rendering too large in the test driver	When exporting Enhanced Matching items in QTI previously, often the text within Enhanced Matching (Drag and Drop) tokens, targets, labels appeared too large.	When exporting these items now it is observed that the text in the UI is substantially closer in size to the QTI that is exported.	Fix
Homepage	Reviewers	Project order for Reviewers	When reviewers accessed the system it was noticed that the order of the projects in the reviewer tab had no discernible order. The previous functionality was alphabetical.	This has been addressed to show the projects in alphabetical order.	Fix
Import Metadata	Managers	Importing a large amount of items causes a popup display that isn't fully visible	When previously importing metadata for a large group of items the retain statistics prompt appeared but not all data was visible on the screen.	The window height has been decreased and a scroll bar has now been introduced to allow users to see the all of the content.	Update

Modify Questions	Writers, Reviewers, Managers	Sizing Enhanced Matching Objects may cause the system to become unresponsive	Resizing EM objects: tokens, targets, and labels to a smaller dimension than the size of the text would lead to the system becoming unresponsive. Items that were previously saved with this configuration could not be opened or viewed in the UI. New items could not be saved.	This has been addressed to eliminate this error.	Update
Assign Work to Users	Managers	Review counts on Assign work to users page is incorrect	When reviewing assignments for users on the assign work to users page it was found that the item counts were inconsistent across users with the same assignment. When users attempted to complete the assignment the correct item count was present; this only affected the assign work to users page.	This issue has been addressed so counts are now accurate.	Fix
QTI	Managers	Point and click items exporting without max selection value	Prior to 1804 before the min/max property was available at the item level, point and click items always exported a max value that was exactly the number of correct responses. After implementation of the min/max setting this was removed from the system. Users need to select max + # of correct options for this value to appear in the QTI.	This change has been reverted. Now the max value will match the number correct when exporting Point and Click items.	Fix
