

9.1.4 Export and Import DT Templates

It is possible to import and export DT templates. Let's take a look at how it is done.

Export a Delivery Template

1. Select the **Create Exam Form DT Templates** menu. Select **ExamForm** in the **Choose Template Type** drop-down and click **Search** to display all the ExamForm templates if you wish to export any ExamForm template. Likewise, select **Section** in the **Choose Template Type** drop-down and click **Search** to display all the Section templates if you wish to export any ExamForm template.
2. Click the **Export DT template** button corresponding to the DT template to be exported. The selected DT exports as an XML file in a ZIP archive.

3. The exported ZIP archive contains the exported DT.
4. The XML file within the ZIP contains all information about the various settings contained in the exported DT.
5. The ZIP file can now be imported.

The import works even between different ExamDeveloper installations, thus making it possible to transfer DT templates containing a set of settings, as long as the DT templates being exported do not contain any items or help rubrics.

Import a Delivery Template

1. Select the **Create Exam Form DT Templates** menu.
2. Click the **Import Template** button.

3. A pop-up opens to select the ZIP archive containing the exported DT template XML file to be imported. Click **Choose File** to browse and select the ZIP file.

Override, if template exists with the same name

QTI_1319869...906765.zip

4. Click **Upload** to import the DT into the currently used ED application.
5. The DT template is now uploaded and a confirmation message identifies the name of the imported template.

List DT Templates Project: ExamDeveloper CTT DT [Help](#)

Listed below are DT templates in the itembank. You can edit the DT templates to add, remove or reorder sections on them.

Create Template:

Choose Template Type:

Page 1 Items Per Page: 20

	Edit	Rename	Export	Copy	Template Name	Type	Last Updated By	Last Updated On
<input type="checkbox"/>	<input checked="" type="checkbox"/>				DT Exam Form Template 1	ExamForm		
<input type="checkbox"/>	<input checked="" type="checkbox"/>				DT Exam Form Template 2	ExamForm		
<input type="checkbox"/>	<input checked="" type="checkbox"/>				Training	ExamForm		
<input type="checkbox"/>	<input checked="" type="checkbox"/>				Training2	ExamForm		

The ED application automatically detects the type of DT template (ExamForm or Section) and imports it appropriately. There is, therefore, no selection to be made for importing DT template according to its type (ExamForm or Section).

7. This DT template is now ready to be applied to any Exam Form/Section as applicable in any project in the current organization.

If a template with the same name already exists in the application, then an error message is displayed as shown and the DT template is not imported.

If you still want to import the DT template with the same name as an existing template and overwrite it, then select the check box next to **Override, if template exists with the same name** and click **Upload**.

[Help](#)

Override, if template exists with the same name

Choose File No file chosen Upload

Template 'DT Exam Form Template 1': Same name already exists.

Please select more files to upload or close this popup.

If you want to import the same DT template with a different name, then you can modify the template "name" value in the XML file with a suitable XML editor and save it back to the ZIP archive to be imported.

```

<?xml version="1.0" encoding="UTF-8"?>
- <qtiTemplate>
  - <template type="ExamForm" name="DT Exam Form Template 1">
    - <![CDATA[
      [{"__type": "QTI.Node.Assessment, Web", "Identifier": "DTExamForm
    ]}]>
  </template>
</qtiTemplate>

```

Now select the ZIP file and click **Upload**, without selecting the check box next to **Override, if template exists with the same name**. The template uploads successfully and a confirmation message identifies the newly modified template.

 If you try to upload an invalid file or file format, the following error message appears. Click the **OK** button to return to the file upload window and start over again.

Override, if template exists with the same name

Choose File No file chosen Upload

The uploaded content must contain the valid xml file.

Please select more files to upload or close this popup.

 If you try to import a template from another organization, containing any items from that organization, then an error message is displayed and the import fails.
