

5.3.6.2 Manual Distribution of Assignments to Users by Manager

Manual distribution of assignments can be carried out by a Project Manager, to assign items specifically to any of the users.

-  Only users with the Permission to Create, Review, or Validate items are displayed on this page.
- Manual distribution is more applicable when a Project Manager needs to assign the collections or search criteria to the users.

1. Click the  **Edit** button for the users displayed from the **Assign Work to Users** page.

Assign Work to Users Project: Casey test Help

This page allows you to assign work to users within the system. Click on the pencil icon to assign questions to the users below. Existing Write, Review and Validate assignments are displayed against each user.

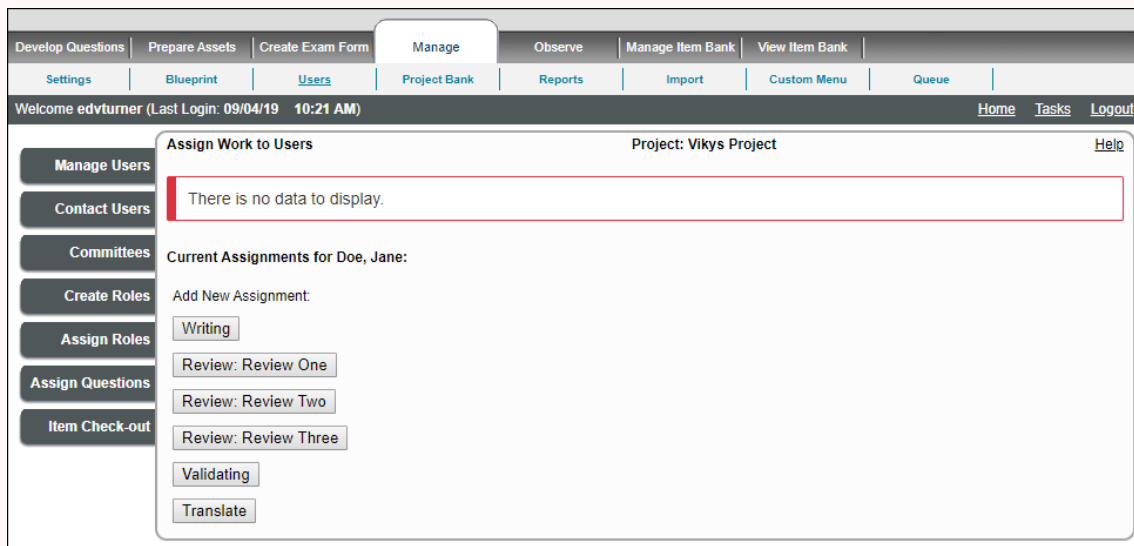

Page 1 Items Per Page: 10 ▼

	User	Activity	Criteria	Remaining
	Smith, Evelyn	No Assignments		
	Smith, Casey	No Assignments		
	Smith, Rusty	No Assignments		

Manage Users
Contact Users
Committees
Create Roles
Assign Roles
Assign Questions
Item Check-out

2. The **Assign Work to Users** page displays the current assignments for the current selected user.

-  If there is no assignment for the user, an error message is displayed in red. All the available types of assignment buttons are listed for the user. The buttons are dependent on the permissions assigned to the user: Write Questions, Review Questions, Translate Questions, and Validate Questions.

- Choose the required blueprint level from the **Blueprint Id** drop-down field. The text list field in front of the drop-down is populated with the blueprint labels and IDs belonging to the selected blueprint level.
- Select the blueprint label for which the user must write items. You can select multiple blueprint labels by clicking the names while holding down the **CTRL** key on the keyboard. If it is not required to specify any metadata criteria, you can skip directly to **Step 7**.

4. Next click the  **Add New** button in the **Select Metadata and Content** section to add metadata and its content that also must be specified as criteria for the work assignment. A drop-down appears under the **Category** column displaying all the various metadata categories in the current project. A drop-down also appears under the **Metadata** column to choose metadata name from the category selected in the first drop-down.

 Only **Drop-down** and **Multi-select List** types metadata can be specified for a Write assignment.

5. If you have opted to include metadata and content while assigning items to be written, you can choose the metadata and its content over using the drop-downs mentioned in the previous step.

Assign Work to Users Project: Casey test [Help](#)

Here you can setup assignments for the selected user. You can edit and delete existing assignments, or add new Writing, Reviewing and Validation assignments.

Current Assignments for McGee, Rusty:

Activity Criteria	Remaining	Users with assignment	Due Date
Write Blueprint: III English Language; ContentCasey: A	5	1	May 31, 2018
Write Blueprint: I Mathematics; ContentCasey: A	5	1	May 31, 2018

Add New Assignment:

On assigning the same blueprint more than once for writing assignments, the page sums up the number of items distributed each time.

Items already in the project affect assignment counts

If a project already contains items belonging to a blueprint node, written by the user, then they are counted against the total number of items for that blueprint node, that the user is required to write.

For example, if a user is assigned 10 items to write in blueprint node 1.5, and he/she has already written 5 items to that blueprint node in the current project before being assigned this assignment, then it shows that the user has to write only 5 more items. For this reason, it is advisable to either:

- Take into account the number of items written by that user already in the project prior to making the new writing assignments, or
- Request that the Item Bank Manager of your Organization **create a copy** of the old project and use the new project for the new assignments. **Remove the old items and assignments** from the new project prior to creating the new assignments.

Add Reviewing assignments

- Click **Review** from the **Assign Work to Users** page. The selected page, in this case **Review: Initial Review State Assignment for page**, is displayed.

- The user can assign **Review: Default Review State Assignment** by creating the **Save Search** and then assigning it to the user.

Why is there a difference in the number of items showing in "Total Questions" and the number that are retrieved?

In the above screenshot the "Total Questions" is showing 222 however the number retrieved is only 146. This is because there are 222 items in the entire project however, there are only 146 that meet the criteria of the review specifications that were provided in the item search.

This page displays the blueprints in the **Specify Assignment** field to assign to the users, only after the auto-assignment activity is carried out for the project.

On discarding all assignments, the **Specify Assignment** field does not display any blueprint except for the saved search criteria that is loaded to the **Specify Assignment** field.

- Specify the required search criteria in the **Search Criteria** field provided in the lower-half of the page and click **Save Search**.
- A pop-up window opens enabling the user to either replace the existing Save Search, or to create new Save Search criteria.

- Click **Submit** to save the search criteria or **Cancel** to discard the activity.
- Click **Refresh List** link next to the **Specify Assignment** drop-down list.
- The Saved Search is now listed in the **Specify Assignment** drop-down list.

Assign Work to Users Project: Casey test [Help](#)

Here you can setup assignments for the selected user. You can edit and delete existing assignments, or add new Writing, Reviewing and Validation assignments.

Current Assignments for McGee, Rusty:

Activity	Criteria	Remaining	Users with assignment	Due Date
Review: Initial Review	DocSearch	13	1	

Add New Assignment:

Column	Description
Activity	The type of assignment: <ul style="list-style-type: none"> • Write • Review • Validate • Translate: Language
Criteria	The assignments criteria: <ul style="list-style-type: none"> • Write: The type of items assigned to the user according to the blueprint and metadata criteria. • Review/Validate/Translate: The assigned search criteria. The name of the saved search used to assign the Review, Validation, or Translation.
Remaining	The number of items available for the respective activity to be carried out according to the specified criteria / Total number of users (including the selected user) to which the same assignment has been assigned.
Users with assignment	A count of users with an assignment that shows the same data in the Activity + Criteria columns (regardless of different due dates). If the user has an assignment with the same Activity + Criteria columns more than once (e.g., write assignments with different assigned count or due dates), then only count the User, not the Assignment.
Due Date	Date in which the assignment must be completed.

Blueprints can be assigned either by auto-assignment or by creating the Save Search criteria for the required blueprints.

Add Validating assignments

Follow the same steps as Reviewing assignments.

Add Translate assignments

The **Translate** button is only available if the selected user has been assigned the **Translate Questions** permission AND the project has more than one language assigned in the item bank.

Project Managers that want to translate items must give themselves the **Translate Questions** permission.

1. Click **Translate** from the **Assign Work to Users** page. The **Translate Assignment for <user>** page is displayed.

2. Select the **Language** you want the user to translate the item into from the drop-down list.
3. **Search** for the desired items and select all the check boxes.

The following items in a saved search are not included in a Translate assignment:

- Items in the same language as the Language selected for the assignment (e.g., French items are not added to a French translation assignment)
- Items already translated to the Language selected for the assignment
- All items other than **MCQ, One Correct Option, MCQ, Multiple Correct Options, Pull Down, Constructed Response / Oral, Display-Type, Fill in the Blank, Spreadsheet, External, and Compound**. You must use the other translation method for the other item types.
- Items in a *Draft, Imported, or Obsolete* state
- Items not editable on the current project
- Items based on the source item that have been translated into other languages
- If the source language item is not part of the saved search, do not include the translated items

If all the items in the saved search result are not valid for translation, then the **Current Questions** and **Remaining** count is set to 0.

You are unable to create a Translation assignment if the group of items is more than 2000. When you create a search for translating items, **DO NOT include more than 2000 items in the saved search**.

4. Click **Save Search**.
5. A pop-up window opens enabling you to either replace the existing Saved Search, or to create new Save Search criteria. Click **Submit**.

Select Search to Replace:

<Select One>

Or Enter a Name:

Submit Cancel

- Click the **Refresh List** link.
- The Saved Search is now listed in the **Specify Assignment** drop-down list.
